

KMedic

Orthopedic Surgical Instruments

KMedic, the leading supplier of orthopedic surgical instruments in the United States, is a certified vendor to many of the world's most respected orthopedic and spinal companies.

In this capacity, KMedic offers companies a one-stop source for instruments when it is neither advantageous to manufacture them nor practical to acquire them piecemeal. In some of our relationships, we serve as a long-term, strategic partner—developing entire instrument lines and custom instrumentation.

In others, we are the resource of choice for specific instrumentation—providing highly crafted instruments in small and large quantities. But whatever the association, our customers value our commitment to providing a total solution at the lowest total cost.

Through the KMedic Total Instrument Management (TIM) program, customers find a partner who consistently demonstrates the ability to design, develop, manufacture, and package a wide array of custom and standard instrumentation.

Design, Development and Manufacturing Capabilities

- Design: Unigraphics modeling, Solid Works, Auto-CAD, fast in-house prototyping
- Processes: passivation, thermal assembly, certified special stainless steel TIN coating process
- Domestic and International Manufacturing: multi axis CNC machining and turning centers, swiss type multi axis CNC turning centers, CNC grinding, CNC robotics, wire and ram EDM equipment, laser marking, electro chemical etching, tool room, welding, soldering, brazing, stamping, bending, honing, and broaching

Services
