

MedSource Technologies

Medical Device Engineering & Manufacturing

MedSource Technologies, Inc. is a provider of engineering, product development, manufacturing services, and supply chain management solutions to the medical device industry.

Since its inception in March 1999, the Company has provided leading and emerging medical device original equipment manufacturers with complete development and design, prototyping, manufacturing, assembly, packaging/sterilization and distribution services of high precision products on a global basis.

As a single integrated company, MedSource is able to reduce development and product life cycle costs and accelerate time-to-market in an industry increasingly dependent upon product innovation and cost control.

MedSource Technologies, with over 1,300 employees in fourteen locations in the U.S. and Mexico, has extensive development experience within medical device industry's orthopedic, trauma and spinal markets. Whether your project includes implants, instruments or ancillary products in metals or plastics, MedSource has core competencies in both.

Our New Product Introduction Group offers a staff of more than 50 engineers, designers, and technicians to design and develop new products for our customers.

Manufacturing capabilities

- CNC Milling
- Precision Metal Injection Manufacturing
- Swiss Screw Machining
- Plastic Injection Molding & Tool Making
- Laser Welding
- Stamping
- Grinding & Coiling
- Final Assembly, Packaging and Sterilization

All MedSource facilities operate under a common Quality System that is ISO 9001 and ISO 13485 certified.
