

# Forecreu America

Manufacturer of Heavy Wall Tubing or Cannulated Bars in Stainless Steel and Titanium.

**FORECREU** is a manufacturer of special metallurgical profiles. The company masters an original process allowing the production of short or long hollow bars, with 1, 2 or more holes. These holes can be straight or twisted, and have numerous industrial applications.

Since the mid-1980s, Forecreu has added to its initial product line, dedicated to high-speed steels for coolant fed tools, a line of products dedicated to the medical market (trauma and orthopaedic).

This dedicated line consists of **HEAVY WALL TUBING or CANNULATED BARS in Stainless Steel and Titanium.**

These bars are available in, but not limited to, these alloys:

- 455 and 17-4PH for instrumentation
- Titanium and 316 LVM for implants

Our typical O.D. range is from 0.156" to 0.625", with I.D. ranging from 0.031" to 0.169". Our process also allows us to extrude multi-hole bars for specific applications.

We also have a subsidiary (V.B.M.) dedicated to BIORESORBABLE applications.
