

Johnson Matthey, Inc.

Advanced Metals Technology

Long recognized as the world's leading authority in metallurgical processing and engineering, Johnson Matthey machines, draws, rolls and forms Platinum, Nitinol & Specialty Metals to your specifications.

With manufacturing facilities in the U.S. and Europe, Johnson Matthey offers global distribution and comprehensive product technologies including:

- **Nitinol Products and Components** – We manufacture a wide variety of NiTi components to meet your unique requirements. Many standard items are in stock for immediate delivery.
- **Micro-Machining and EDM** – Our world-class CNC Swiss Screw Machines and EDM capacity operated by trained specialists produce the highest-quality micro-machined parts available. And, with our development cell dedicated to machining prototypes, we are capable of quickly developing new components for your product demands.
- **Centerless Grinding/Precision Custom Machining** (from specifications to finished parts).
- **Hypotubes** – From prototype through high-volume production (providing customized services including skyving, flaring & PTFE coating).
- **JM Clad™ (Alternate Core) Wire** – Nitinol, platinum and base metal combinations.
- **Fine Wire & Rod** – The quality of our wire and rod is unsurpassed anywhere in the world and is available in all the standard and special order alloys in sizes ranging from .001” up to .125”. We can also support your unique needs for larger, more customized sizes.
- **Tubing / Cut Tubing / Marker Bands** – Johnson Matthey is one of the only sources for precious metal tubing with a wall thickness as thin as .001”. Whether it is micro-tubing, larger tubes, or cut to length tubes, Johnson Matthey offers the largest inventory, the largest range of sizes and alloys and the finest quality in the industry.
- **Coatings** – Used to enhance the surface of various machined parts. Products include platinum powder coatings, gold coating or sputter coating.
- **Sheet & Foil** – Manufactured especially for the medical device and equipment components industry.
