

Press Release

Date: November 6, 2007

Subject: Patent Issued

Loukas Medical, Inc. (LMI) has just received design patent D663,464 from the US Patent and Trademark Office. The patent is for a new ergonomically designed screwdriver handle. The handle is hexagonally shaped to fit perfectly into various sizes of hands and does not have the awkward feel that most square shaped handles have. The precisely placed thumb indentations enable this handle to be used equally well, in right or left-handed operations. LMI is a design consulting firm and its owner, James A. Rinner, has over 25 years of experience in spinal implant and orthopedic instrument design. Mr. Rinner has 39 US patents in the orthopedic field.
